

Specifications:

1.27m x 50m
Covers approx 61 sq metres
50/75mm overlap
Weight 490g/m²

Benefits:

- 1 hour fire barrier
- Easy application
- Water Resistant
- Strong and durable
- Breathable
- Standards and Approval (B.S.476 Part 3 2004)
- Flexible

Application:

Thatch Firewall is laid horizontally across the rafters, similar to roofing felt with a 50mm/75mm overlap. Thatch Firewall can be either stapled or nailed to rafters. Then counter batten over the rafters with 25mm x 50mm to allow for airflow. Finally fix first batten 5" from orris rail followed by 12 Inch centres thereafter.

Thatch firewall developed jointly between Rentokil and TAS was manufactured to specifications as recommended by Building Control. This product provides one hour fire barrier (B.S. 476: Part 3 2004) Classification EXT.S.AC. Fixed between the thatch and roof construction. In the event of a thatch fire, the thatch is sacrificial and untreated. The Firewall (LFB60) is a lightweight glass fibre fabric coated both sides with a polyurethane polymer containing micronised aluminium.
